[a I want to register](#)

I do not know how to check if a person registering shall be allowed or not because I do not want that everybody can sign in. Is a normal registry process reasonable or is there another way of adding new users? Or shall there be maybe just one user for all and a new registry shall not be allowed? The latter seems to be the easiest way.

Starting password (given by admin)

Get membership

Sign in / Registry is only possible for invited persons. Invitations can only be made by the admin/s and they give (I still do not know how) a starting password which is valid only for the first sign in. I do not have a wireframe how that is done.

# Document list page

This is the main page

User credentials e.g. new user or change password mockups are still missing

One could program a speech detection like #20 in JS30 (optional)!

- Sorting is not mandatory but if JS 30 Array Cardio Day 1 is helpful: Sort people or Ajax Type Ahead (Filter function) or #17 (sort w/o articles)
- console.table for this layout? (#9 Dev Tools Domination)

Insert a check that the user does not upload other formats than pdf or jpb e.g. mpg, tiff

# Choose a file from your directory e.g. Windows Explorer

Your explorer e.g. Windows Explorer

-  Closed folder
-  Open folders
-  File icon
-  use spaces or dots for hierarchy
- ▼ just like
  -  this
